Installations

Site Status

The objective of the Military Munitions Response Program (MMRP) is to reduce the impacts to safety, human health, and the environment caused by military munitions-related hazards resulting from past Department of Defense activities. There are about 1,850 installations with MMRP sites.

Formerly Used Defense Sites (FUDS) were used by the military to train Soldiers, Airmen, Sailors and Marines, as well as to test new weapons

and warfare capabilities. After wartime, many properties were no longer needed, and were cleaned up according to the best practices available at the time and were then transferred to other landowners.

Through the FUDS program, the U.S. Army Corps of Engineers is reducing risks resulting from past military use of property, by addressing military munitions and potential harmful substances.
